Allowable Subject Matter

1. Claims 1-5, 7-10, 12-15, 17-20, 22 are allowable over the prior art of records.
2. The following is an Examiner's statement of reasons for the indication of allowable subject matter: Claims 1, 8, 14, 18 are allowable over the prior art of record because the prior arts, cited in its entirety or to combine any of the prior arts, do not teach a processor to receive an interrupt signal intended for a system processor from the expansion device on the expansion bus in a command path and to prevent the interrupt signal from reaching the system processor in the command path.

The remaining claims, not specifically mentioned, are allowed for the same rationale as set for their dependent claims.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the Issue Fee and, to avoid processing delays, should preferably **accompany** the Issue Fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to examiner Raymond Phan, whose telephone number is (571) 272-3630. The examiner can normally be reached on Monday-Friday from 7:30AM-4:00 PM. The Group Fax No. (571) 273-8300.

Examiner's Amendment

2. An Examiner's Amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 C.F.R. § 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the Issue Fee.

Authorization for this Examiner's Amendment was given in a telephone interview with Ms. Julie Reed (Reg. #35,349) on September 24, 2007.

3. The application has been amended as follows:

1. A ~~network~~ bridge device, comprising:

a first port to allow the bridge device to communicate with other devices on an expansion bus;

a second port to allow the bridge device to communicate with devices on a system bus;

a memory to store data; and

a processor to:

receive a set of data from an expansion device on the expansion bus in a data path;

receive an interrupt signal intended for a system processor from the expansion device on the expansion bus in a command path and to prevent the interrupt signal from reaching the system processor in the command path;

transmit the set of data into a transaction queue in a data path to the system processor;

generate an indicator of completion to the system processor to indicate the completion of the data transmission to the system processor; and

insert the indicator into the transaction queue in the data path to a system memory associated with the system processor after the set of data;
generate a read request to the expansion device.

2. The ~~network~~ bridge device of claim 1, the ~~network~~ bridge device further comprising a peripheral component interconnect bridge.

4. The ~~network~~ bridge device of claim 1, wherein the second port allows the bridge device to communicate with devices on an expansion bus.

5. The ~~network~~ bridge device of claim 1, the processor to generate an indicator of completion further comprising the processor to generate a transaction addressed to a predetermined area of a system memory.

7. The ~~network~~ bridge device of claim 61, the processor to insert the indicator further comprising the processor to transmit data from the read request to a predetermined address in a system memory.

14. A ~~network~~ bridge device, comprising:
a means for allowing the bridge device to communicate with other devices on a first bus, the first bus being an expansion bus;
a means for allowing the bridge device to communicate with devices on a second bus the second bus being a system bus;
a means for storing data; and
a means for:

receiving a set of data from an expansion device on the expansion bus in a data path;

intercepting an interrupt signal intended for a system processor from the expansion device on the expansion bus in a command path and preventing the interrupt signal from progressing to the system processor;

inserting the set of data into a transaction queue in data path to the system processor;

generating an indicator of completion to the system processor to indicate the completion of the data transmission to the system processor; and inserting the indicator into the transaction queue in the data path to a system memory associated with the system processor after the set of data; generating a read request to the expansion device.

15. The ~~network~~ bridge device of claim [1] 14, the ~~network~~ bridge device further comprising a peripheral component interconnect bridge.

17. The ~~network~~ bridge device of claim [1] 14, the means for allowing the bridge device to communicate with device on a second bus further comprising a means to allow the bridge device to communicate on a second expansion bus.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the Issue Fee and, to avoid processing delays, should preferable **accompany** the Issue Fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
